Yes,

The only time to stop a proposal is before the final decision is made. Since the spring, NDP MPPS and local Councillors have been actively involved in mobilizing our east end community to insist that the McGuinty government **disallow** the Third Transmission line in the IPSP plan.

In addition to raising this issue on a number of occasions in the legislature, media and different community meetings, my colleague Peter Tabuns has been conducting a door canvass over the summer to collect signatures on petitions supporting such a regulation and reinvestment of focus and resources into efficiency, conservation, cogeneration and green power.

Our NDP Green Lights plan also offers a solution to make the possibility of the third transmission line obsolete-good news for east end residents.
