

It's time to make electricity savings real!

Premier Doug Ford can
deliver on his promise to
reduce electricity costs 12%.

HERE'S
HOW.

Please sign the petition asking
Premier Ford to lower our electricity
bills by making a deal with Quebec
and by investing in energy efficiency.

www.CleanAirAlliance.org/time-to-save

The Ford Government says it can lower electricity costs by 12%, but it hasn't presented a real plan.

We don't need more accounting tricks or special deals for electricity insiders.

We need real savings on our hydro bills.

Here's how it can be done.

Take Quebec Premier Francois Legault up on his offer to supply Ontario with low-cost electricity

Every nuclear project in Ontario's history has gone way over budget - we don't need more energy boondoggles. Let's start saving by saying yes to Quebec's offer of selling us more of their abundant hydro-electricity to replace our high-cost nuclear projects.

Quebec has plenty of power to spare and we can get it to Ontario with existing infrastructure. What are we waiting for?

Help households and businesses save money by expanding low-cost energy efficiency programs

These programs have been so successful in Ontario that we pay only 2 cents per kWh to save electricity. This means lower bills, less pollution and no need for expensive new generating stations.

We all win by helping every Ontarian use electricity smartly.

Please sign the petition asking Premier Ford to lower our electricity bills by making a deal with Quebec and by investing in energy efficiency.
