Sault Ste. Marie Provincial By-Election Questionnaire

Question #1: Do you support Ontario Power Generation's proposal to raise the price of its nuclear electricity by 180% to pay for the continued operation of its high-cost Pickering Nuclear Station and to re-build the Darlington Nuclear Station?

Answer: Yes _____ No _____ Undecided _____

Additional Comments:

In this election, I'm fighting for good jobs and affordable energy for Saultites.

If I am fortunate enough to be elected as MPP for Sault Ste. Marie, my focus will be bringing jobs and prosperity to the Soo. In that vein, I am less concerned with ideological leanings on nuclear power than I am with ensuring a steady supply of reliable and affordable power to fuel local industry like Essar and Tenaris.

Simply put, if continuing operation of the Pickering Nuclear Station and refurbishment of Darlington can ensure cost-effective electricity to fuel our province, than I am supportive of this plan.

Question #2: Should the Government of Ontario seek to negotiate a new long-term electricity supply contract for Quebec water power which will allow us to close the Pickering Nuclear Station and lower our electricity bills?

Answer: Yes _____ No _____ Undecided _____

Additional Comments:

I am not an expert on Electricity production or trade. Rather, as a life-time Saut Ste. Marie resident, and former Mayor, my expertise is the Soo. If the Province has the capacity to sign contracts that would reduce electricity prices for Saulites, than I will advocate for that action to be taken.

Question #3: Should Ontario take advantage of falling costs for wind and solar power and continue to build community scale renewable energy projects?

Answer: Yes _____ No _____ Undecided

Additional Comments:

Developments in renewable energies, especially right here in Sault Ste. Marie, are something we should be very proud of. Heleine Renewables, located right in our City, produces state-of-the-art solar panels while providing valuable employment opportunities that allow workers to remain in the Soo.

By supporting companies like Heleine, and investing in clean power, we are working towards a cleaner, more sustainable future. If we can do this while reducing electricity prices, we will be in a good place.
