

No Need for Cuts

No Need for Bigger Class Sizes

No Need for Public Health Cuts

The Ford government is cutting spending on everything from schools and health clinics to childcare and tree planting. **But there's a better way to balance Ontario's budget. The government can save billions by cancelling expensive nuclear projects and importing low-cost water power from Quebec instead.**

Water power from Quebec could replace high cost nuclear at less than $\frac{1}{3}$ rd the cost, saving us billions.

Instead of cuts, **we need a sensible electricity plan that includes a deal with Quebec, strong energy efficiency programs and made-in-Ontario renewable energy.** We don't need to subsidize high-cost nuclear power by eliminating learning opportunities for our kids, leaving our communities vulnerable to flooding, and closing the book on library programs.

Replacing expensive nuclear power with low-cost water power from Quebec would give Ontario all the money it needs to restore and protect critical public services.
