

Orleans 2020 Provincial By-Election Questionnaire

Question: According to Ontario's Independent Electricity System Operator, Ontario's electricity-related greenhouse gas emissions will rise by more than 300% by 2025, and by more than 400% by 2040 due to increased reliance on gas-fired power plants. Do you believe that Ontario should sign a long-term contract with Hydro Quebec for water power to reduce our greenhouse gas emissions and to lower our electricity bills?

Answer: Yes _____ No Undecided

Additional Comments:

Our plan, the Green New Democratic Deal, wants to lower greenhouse gas emissions. We will make Ontario a net-zero emitter by 2050, and cut emissions by 50% before 2030. The specific mechanism of how, can be decided by cabinet. Should we buy hydro power from Quebec? Should we switch to our own solow producers? Those details are less important than just cutting Greenhouse gases.

Furthermore, we want to :

- a) Create 1 million jobs in the green energy economy
- b) Add 1 Billion dollars to our economy
- c) Start the largest building retrofit programme anywhere in the world
- d) Provide homeowners interest free loans for home renovations
- and, e) Deliver jobs training, for workers transitioning out of carbon emitting workplaces.
