

Tell Canada's Finance Minister
Chrystia Freeland:

**Don't
subsidize
a new GTA
nuclear
reactor!**

Ontario Power Generation is planning to build a new nuclear reactor near Oshawa despite the fact that the cost of power from this reactor will be two to five times higher than power from wind and solar.

Electricity Cost Comparison

To add insult to injury, **The Government of Canada** wants to use **your tax dollars** to **subsidize** the development of new nuclear reactors despite the fact that they are the **highest cost and slowest option** to reduce greenhouse gas pollution.

The world is going renewable.

According to the International Energy Agency, **95% of the growth in global power capacity over the next 5 years will be renewables.** It doesn't make sense to build a new nuclear reactor in the GTA on the shores of Lake Ontario given that **wind and solar energy can keep our lights on at less than half the cost** without producing toxic radioactive wastes.

A New
GTA
Nuclear
Reactor

vs

Wind
and
Solar

Please go to

NoNewNuclear.ca

and tell Chrystia Freeland
you want Canada to invest in
wind and solar energy, not
nuclear reactors.
