In October 2022, Ontario’s Independent Electricity System Operator (IESO) released a document entitled “More IESO Trickery: About Phasing-Out Gas Power” which reveals the IESO’s continued refusal to reveal assumptions around 2030 gas power phaseout. The IESO is once again adopting a number of biased assumptions, including:

- The IESO’s proposed assumptions reveal that it is planning to once again issue a misleading Pathways to Decarbonization report. On July 19, 2022, the IESO released its 2022 Annual Planning Outlook that grossly exaggerates the cost of moving Ontario to a zero-carbon electricity grid by 2030. This does not reflect the true least-cost pathways to decarbonization. As we outlined in our previous report, the key elements of a least-cost pathway to decarbonization are:
