PORTLANDS GAS PLANT: TORONTO'S POLLUTION GIANT

How much more pollution — & for how long?

THE PORTLANDS GAS PLANT ON OUR WATERFRONT IS TORONTO'S LARGEST SINGLE SOURCE OF SMOG & CLIMATE POLLUTION.

Instead of working to phase it out ASAP, the Ford Government is expanding it while pouring billions into building 4 new, high-cost American nuclear reactors east of Toronto.

Even in the best-case scenario, the proposed new U.S. reactors won't be ready for another decade or more — & would rely on enriched uranium imports from the U.S., leaving us vulnerable to hostile actions by the White House.

We are wasting time & money and jeopardizing our energy security.

WE HAVE FASTER & LOWER-COST OPTIONS TO REPLACE GAS POWER AND CUT POLLUTION

- Rooftop & parking-lot solar
- Energy efficiency & demand management
- A Lake Ontario wind farm
- Energy storage including the use of EV batteries to feed power back into the grid when needed

THE WORLD IS GOING RENEWABLE — ONTARIO IS STUCK IN THE PAST

In 2024, **over 92%** of the world's new electricity generating capacity came from **renewables** — but Ontario hasn't added any new solar or wind in seven years.

The Ford Government plans to **expand nuclear** from 48% of Ontario's electricity supply in 2024 to 75% by 2050

— while **shrinking renewables** from

35% to 25%.

NUCLEAR 22.1-32.2 ¢

> OFFSHORE WIND 12.0 - 12.9 ¢

Ontario is going in the wrong direction!

UTILITY-SCALE SOLAR 5.7 ¢

ONSHORE WIND 3.8 - 6.0 ¢

Cents per kWh (CAD)

ADD YOUR VOICE

Toronto Deserves an Affordable, Renewable Future

ASK PREMIER FORD TO:

Phase-out the Portlands gas plant by 2030;

Invest in wind, solar, storage & efficiency; &

Cancel the construction of new high-cost nuclear reactors which will raise our electricity bills.
